

Adam O'Deven

adam@odeven.net (248) 829-0272 adamodeven.com Atlanta, GA Detroit, MI

Mechanical Engineering & Industrial Design student focused on translating user needs into manufacturable systems through CAD and prototyping. Experienced in owning early-stage hardware from concept through physical validation.

Education

Georgia Institute of Technology – June 2024 - Present

BS Mechanical Engineering, BS Industrial Design

3.64 GPA, Honors Program, GT Crew, Exec Board @ Chi Phi Fraternity

Notable Coursework: Statics, Dynamics, Industrial Design Studio, Circuits & Electronics, Computing for Engineers, Engineering Graphics, User-Centered Design Methods, Differential Equations.

Skills

CAD & Mechanical Design

SolidWorks (7 Years), Parametric Modeling, Top-Down Assembly Design, DFM & DFA, Familiar With GD&T

Prototyping & Fabrication

CNC Machining (3-Axis), 3D Printing (FDM), Manual Milling, Metal Lathe, Mechanical Assembly, Soldering, Circuit Design

Design & Visualization

Concept Sketching, Adobe Suite, KeyShot, Product Photography

Research & Evaluation

User Research, Usability Testing, Prototype Evaluation, Iterative Refinement

Experience

REAR Lab Research – Aug 2024 - Dec 2024

Product Developer

- Informed early-stage assistive medical device prototypes by translating clinical user observations into mechanical requirements and CAD assemblies.
- Built and iterated multi-part assemblies in SolidWorks and Fusion 360, incorporating ergonomic constraints, component packaging, and rapid prototyping limitations.
- Fabricated and assembled prototypes using 3D printing, manual machining, and mechanical assembly.
- Conducted field observation and usability testing with clinicians and wheelchair users at the Shepherd Center to validate mechanical feasibility and user interaction.
- Documented and compared CAD workflows to reduce iteration time and improve design handoff between conceptual and detailed modeling stages.

RoboJackets K12 Foundation – June 2018 - Present

Currently Mentor, Previously Mechanical Engineer & Brand Designer

- Led mechanical design, prototyping, and assembly for 28 competition systems, balancing robustness, manufacturability, and performance under time and resource constraints.
- Owned assembly development from SolidWorks to implementation, emphasizing parametric modeling, assemblies, and design intent for rapid iteration and repairability.
- Supported system production across CNC machining, 3D printing, manual machining, and electrical/mechanical assembly.
- Coordinated build and assembly work across a 25-person interdisciplinary team.

Georgia Tech Office of IT – Aug 2024 - Present

Wireless Network Services Student Assistant

- Support campus hardware deployments by documenting technical processes and troubleshooting physical networking equipment.
